Abstract

Research Methodology:- Statement of the problem:- “A study of attitude towards caste reservation among people.” Sample:- For the present study I used the non probability sampling method and collected 20 samples. Tool: - Reservation Attitude Test Reservation Attitude Test constructed by Researcher. In this test 10 items and 3 alternative in this test. Statistical Analysis: -Chi square was used for the statistical analysis of data. Conclusion: positive attitude found that caste reservation among people in Aurangabad city.

Keywords: Attitude, Reservation

Introduction:

India being a creating country is as of now confronting numerous difficulties and the reservation framework being one of them. The greatest inquiry that lies before us is in the case of actualizing this reservation framework has truly helped the discouraged? The present situation plainly portrays that the 'lower' castes are still separated in their day by day lives. To remove casteism it is significant that we battle the reservation framework which alone will lead us to improvement, competency, balance and solidarity.

Initially we have to comprehend that the reservation framework just partitions the general public prompting segregation and clashes between various areas. It is abusive and doesn't discover its premise in casteism. It is really the absolute opposite of a common living.

Is amazing that our constitution unmistakably is a reservation-accommodating constitution however no place in the constitution is the term 'in reverse classes characterized. What really comprises a regressive class? What are the determinants of a retrogressive class? These inquiries stay unanswered and it is just with the assistance of legal proclamations that they have been given some importance. Question emerges in what capacity would reservations be able to be made for something that has not been characterized?

Today when an understudy applies for an affirmation in any college, the confirmation structures are loaded up with questions like 'Are you SC/ST or OBC or General Category?' How does it make a difference which classification does he have a place with, what is important is his legitimacy. A classification can't choose whether he is qualified for confirmation or not. There numerous financially more awful off youngsters having a place with the forward classes however they can't get the products of such reservation only by temperance of having a place with the 'general' classification. Now and then these kids having a place with the retrogressive classes don't merit and still have the fundamental legitimacy as against a kid who read difficult for a considerable length of time to get a seat, along these lines grabbing ceaselessly that seat since he originates from a specific religion or rank for which our administration gives reservation.

Reservation ought to be absolutely made based on the efficient states of the candidate and that's it. The sort of reservation arrangement that our administration as of now pursues sits idle however separate the general public into various areas.

Reservations are only intends to flourish the vote banks of government officials. They are upsetting the nation's development, improvement and competency in all perspectives.

Reservations based on position and not based on condition are terrible and unsatisfactory. Reasonable and only reservations to elevate the individuals with poor states of life, the

individuals who don't have dinners to eat, garments to wear and no home to live in. They will be made based on components, for example, sexual orientation as ladies are more hindered than men since crude occasions, home, family instruction, family work, family property, family pay and if any handicaps and injuries. The procedure of reservation ought to be with the end goal that it channels the genuinely financially denied people and present to them all to equity.

In this manner reservations are hostile to theory of advancement and correspondence. We needn't bother with reservations dependent on castes or religion however just to really give help to the individuals who have insignificant assets; and legitimacy ought to be given equivalent and due significance in confirmation strategies also business openings. Along these lines we would be effective in evacuating position separation and join the monetarily rich together in helping the financially poor, regardless of their castes.

Research Methodology:-**Statement of the problem:-**

“A study of attitude towards caste reservation among people.”

Sample:-

For the present study I used the non probability sampling method and collected 20 samples.

Tool: -**Reservation Attitude Test**

Reservation Attitude Test constructed by Researcher. In this test 10 items and 3 alternative in this test.

Procedure of data collection:-

Participants were given brief description about the purpose of the data collected from them will assured that the data collected from them. It will be only use for the research purpose and it'll take confidential.

Statistical Analysis: -Chi square was used for the statistical analysis of data.

Statistical Analysis of Data
